

Stop delay

Function of the component:

With the function component stop d-lay, turning off consumers can be performed delayed. Results of a calculation (e.g. hysteresis component) can also be switched off delayed.

Go to „Controls“ in „Device configuration“. Create a new control function with the green plus

Go to „Functions“ and create a new component with „Stop delay“.

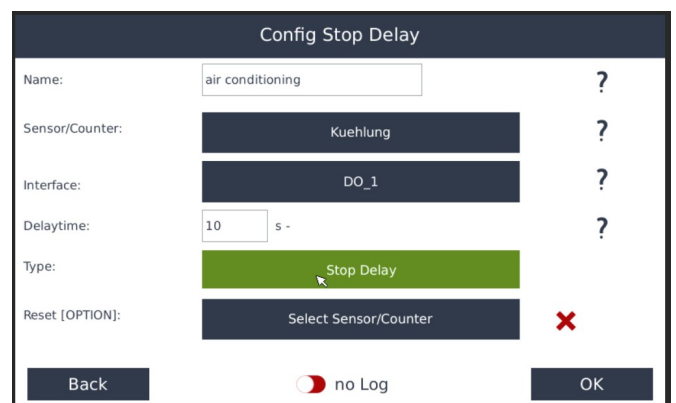

Enter a name at „Name“ e.g. air conditioning.

Select your function compo-nent at „Sensor/Counter“ e.g.: hysteresis of the stop delay.

At „Interface“ enter e.g.: DO_Relais.

At „Delay“ enter the desired start delay in seconds e.g. „10“

With the grean button you can switch to different delay modes

The screenshot shows a configuration window titled "Config Stop Delay". It contains the following fields and options:

- Name: air conditioning
- Sensor/Counter: Kuehlung
- Interface: DO_1
- Delaytime: 10 s
- Type: Stop Delay (highlighted in green)
- Reset [OPTION]: Select Sensor/Counter

At the bottom, there are three buttons: "Back", "no Log" (with a toggle switch), and "OK".

(StopDelay/StartOneShot/StopOneShot/DelayedOneShot/StartDelay)

Confirm with „Ok“. Go to the device configuration an press „Save“.
